

Exercise 1 - Travel Consulting Company ERD

Assumptions

The company has exactly 12 team records. Each team handles one current region; reassignment updates team.regionId. Consultants may belong to multiple teams. callType is newTravelNeed or existingReservation. reservationId is null for a new travel need. Monthly statistics are calculated from callDate, callType, and durationMinutes.

Exercise 2 - DVD Rental Company ERD

Assumptions

A staff member works at one branch at a time; branch.managerStaffNumber identifies that branch's sole current manager. branch_movie stores the standard daily rate for a movie at a branch. rental.dailyRentalCost preserves the rate charged at checkout. A member may register at multiple branches. Full member name and movie title on a rental are derived through relationships rather than duplicated. A member may have at most 10 active rentals where dateReturned is null. dvd.status indicates availability.
